

FOR IMMEDIATE RELEASE:

**HINKLEY LIGHTING INTRODUCES NEXUS 15v LED  
Revolutionary Landscape Lighting System**

Cleveland, Ohio – July 19, 2010 – Hinkley Lighting’s NEXUS LED 15v High Performance Landscape Lighting System combines the latest in cutting-edge LED technology with the ultimate in high-end landscape lighting design to create a modern, energy saving system that takes outdoor lighting to a new level of eco-chic.

The NEXUS consumes about 75% less electricity than incandescent halogen systems with similar light output, which also results in a savings of 50% on total lifetime cost. 15 volts maximizes the light output and chip life, providing the fully enclosed LED strips with 50,000 hours of maintenance free use. A separate 15v DC driver reduces excessive heat that could damage or diminish the LED performance.

This clean, contemporary style features four flexible lighting applications along with four stem options to achieve almost any lighting design. Each element, constructed of solid aluminum with 350° head rotation, is available in a heavy duty bronze powder-coated marine grade finish.

The assembly options include an elbow, T-connector, mini-bollard or swivel option that, when paired with varying stem lengths, will provide virtually unlimited lighting options to enhance landscape design, harmonizing with any exterior residential and commercial lighting application.

Please contact Hinkley Lighting for detailed test information on light engine, photometrics and lumen output.

Located in Cleveland, Ohio, Hinkley Lighting has been a leading manufacturer and distributor of high-quality lighting fixtures for over 80 years and is driven by a passion to blend design and function in creating quality products that enhance the lifestyles of their customers.
